

Workday Concept: Integrations

Why are integrations from legacy systems so complex?

Traditional ERP applications did not consider the need for data-processing and communication with other systems. Today, achieving integrations from legacy systems is complex, due to:

- ***Different systems***
- ***Disparate technologies***
- ***Required ongoing maintenance***
- ***Escalating costs***

Will integrations with Workday be less complex?

Yes. To simplify integrations, Workday offers a variety of packaged integration tools:

1. Application Programming Interfaces (APIs):

APIs specify how various software components interact. Workday offers comprehensive APIs to support all integrations to and from Workday

2. Integration Cloud Platform: *Enables integrations to be built, deployed and managed in Workday's Cloud*

3. Integration Cloud Connect: *Workday's ecosystem of packaged integrations and connectors are managed in the Workday Cloud. This vendor-supported approach significantly shifts the cost, risk and burden of integrations from the customer to Workday.*
